Loylty Rewardz – Sr. Software Developer (.NET)

Experience: 4-8 years of hands on experience

Desired Profile:

We are looking for a talented individual who has had the experience of working on high traffic consumer facing web applications. He or she should have at least 4-8 years of hands on experience. He / She should have a command over development best practices. He / She should have extensive experience in developing web-based applications using the .NET Framework. The candidate needs to be up to date with the latest developments in the .NET world.

He or she should be a stickler for quality. He or she should have the ability to multi-task. Ideally, he or she should be passionate about code. The candidate will be responsible for all deliverables assigned.

In addition, the individual should have the desire for pushing the personal and technological boundaries. He or she should have excellent organizational and time management skills; ability to work independently and solve problems. We as an organization are extremely passionate when it comes to technology hence we desire people with passion and energy to get the job done.

In addition, you need to be ace troubleshooter to identify solutions for complex problems. You should have the hunger to learn new skills and work with cutting edge technologies. You should have the commitment towards quality - a zero bug policy; you should have the ability to review and correct deficiencies in your teams work and mentor them to deliver high quality. You should have the ability to lead from the front taking on challenges and delivering high quality applications.

Must have skills:

- Experience in object-oriented design. Must have a solid grasp on data structures and algorithms.

- At least 4 years of experience in building web applications using the latest .NET Framework's

- At least 4 years of experience in C#, ASP.NET MVC

- Hands on experience with writing and consuming web services: WCF, REST, and Web API. Experience in implementation, customization, integration and deployment of API's.

- Experience in using Microsoft SQL Server / MySQL.

- Experience with client-side technologies such as JavaScript, JQuery, CSS, and HTML. Angular JS would be a good to have skill.

- Experience in unit testing framework such as NUnit

- Should have a solid understanding and experience of using design patterns.

- Experience in developing high traffic customer facing sites

- Experience working in high-performing agile teams
